ABSTRACT

This study discusses the correlation and volatility of the Nikkei index, Dow Jones and FTSE in the year 2006 - June 2010 by using the GARCH model is GARCH (1,1) for both contemporaneous and dynamic volatility volatility while for correlation using the correlation Pearson.

GARCH model will be conducted using three different methods namely Maximum Likelihood method, Normal (Gaussian) distribution with Marquadt optimization, the method of Maximum Likelihood Normal (Gaussian) using optimization Berndt-Hall-Hall-Hausman (BHHH) and Maximum Likelihood methods Generalized Error Distribution (GED) with optimization Berndt-Hall-Hall-Hausman BHHH, and dividing the period into three parts, namely the period of Growth, Crisis and Recovery.
PREFACE

Author give thanks to Almighty God for all His mercy, so that author can complete the thesis. This thesis partly done to meet academic requirements to obtain a Master degree in Management Tier Two of the Faculty of Economics, University of Pelita Harapan Surabaya.

In writing this thesis, the author of many have difficulty in developing and applying theories that have been the author learned in lectures. And with the help of various parties, so the writer can complete this thesis. To the author say many thanks to:

1. Eko Widodo, Dr. Lo, acting supervisors who have provided time and assistance in the preparation of this thesis.
2. Dr. J. Zeplín H. Tarigan, ST, MMT, as a thesis adviser for guidance on the preparation of theses measures.
3. Bastian Pasaribu, as college friends who share the input and knowledge about the theory of GARCH and Eviews program.
4. Throughout her family gave me a lot of good material and moral support.
